

CLAIMS

1. A method for handling a message exchange session between wireless communication terminals via a wireless network, and including steps of:

- 5 • initiating a message exchange session by:
- identifying in a first communication terminal at least one other communication terminal to be invited to participate in the message exchange session,
 - inputting a message text,
 - transmitting said message text to said at least one other communication terminal; and
- 10 • responding to received message by:
- inputting a message text for replying to the received message,
 - adding said inputted reply message text to the received message text, whereby the aggregate message text includes the message exchange session history,
 - 15 • transmitting said aggregate message text to the other communication terminal being party to the message exchange session.

20 2. A method according to claim 1, wherein a point-to point short message service in the wireless network is used as message exchange session.

3. A wireless communication terminal having a message exchange session handling application for handling messages in a message exchange session in
25 a wireless communication system, said terminal comprises:

- a software application having means for initiating a message exchange session, said initiating means includes:
 - means for identifying at least one other communication terminal to be invited to participate in the message exchange session,
 - 30 • means for entering a text input as a message text,

30

- a transmitter for transmitting said message text to said at least one other communication terminal; and
 - a receiver for receiving a reply from said at least one other communication terminal,
 - said software application furthermore having means for replying to a message during a message exchange session, said replying means includes:
 - means for entering a text input,
 - means for adding said text input to the received message text for generating an aggregate message text for replying by means of the transmitter.
4. A wireless communication terminal according to claim 3, wherein the transmitter transmits the message text by means of a point-to point short message service in the wireless network.
5. A wireless communication terminal having a message exchange session handling application for handling messages in a message exchange session in a wireless communication system, said terminal comprises:
- said software application furthermore having means for replying to a message during a message exchange session, said replying means includes:
 - means for entering a text input,
 - means for adding said text input to the received message text for generating an aggregate message text for replying.
6. A computer program product stored on a computer readable storage medium, comprising:
- computer readable program code means for replying to a message during a message exchange session in a wireless communication system, said computer readable program code means provides a message exchange

session handling application in a wireless communication terminal; and said computer readable program code means

- handles a text input entered by the user; and
- adds said text input to the received message text for generating an aggregate message text for replying.

7. A method for handling a message exchange session between wireless communication terminals via a wireless network, and including steps of:

- sending from a wireless communication terminal by means of a point-to-point short message service in the wireless network a message containing a request for participating in a message exchange session;
- routing the request message from the wireless communication terminal to a message exchange session handling server via the wireless network;
- connecting in the message exchange session handling server the requesting wireless communication terminal to a group of communication terminals;
- handling a message text in said message exchange session handling server by successively adding received message text from group of communication terminals to the message text in order to update the message text; and
- transmitting the updated message text to the group of communication terminals participating in the message exchange session.

8. A system for handling a message exchange session between wireless communication terminals via a wireless network, said system includes

- means for handling point-to point short message service in the wireless network;
- a message exchange session handling server; and
- a group of wireless communication terminals accessing said message exchange session handling server via said point-to point short message service;

1970	1971	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981	1982	1983	1984	1985	1986	1987	1988	1989	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048	2049	2050	2051	2052	2053	2054	2055	2056	2057	2058	2059	2060	2061	2062	2063	2064	2065	2066	2067	2068	2069	2070	2071	2072	2073	2074	2075	2076	2077	2078	2079	2080	2081	2082	2083	2084	2085	2086	2087	2088	2089	2090	2091	2092	2093	2094	2095	2096	2097	2098	2099	2100	

- 5
- said wireless communication terminals are adapted to send a request for participating in a message exchange session by means of point-to point short message service to said message exchange session handling server;
 - said message exchange session handling server has a message text for the group of wireless communication terminals, and the server updates the message text by successively adding received message text from members of the group of communication terminals, and transmits the updated message text to the group of communication terminals participating in the message exchange session.
- 10
9. A method for handling a message exchange session between wireless communication terminals including steps of
- generating a list of communication terminals to be invited to participate in the message exchange session,
 - inputting a message text,
 - transmitting said message text to the communication terminals listed on said list,
 - receiving a reply from one of the communication terminals listed on said list,
 - transmitting the reply from said one of the communication terminals to the communication terminals listed on said list.
- 15
- 20
- 25
10. A method according to claim 9 wherein said message text is successively transmitted to each of said communication terminals listed on said list.
- 30
11. A method according to claims 9 or 10 wherein said reply is successively re-transmitted to each of said communication terminals listed on said list apart from the replying one.
12. A method according to claim 9 wherein the reply message text is automatically added above the previous message text prior to the re-

transmission of the reply from said one of the communication terminals to the communication terminals listed on said list.

5 13. A wireless communication terminal having a message exchange session handling application for handling messages in a message exchange session in a wireless communication system, said terminal comprises:

- Sub
ai
- 10
- means for generating a list of communication terminals to be invited to participate in the message exchange session,
 - means for inputting a message text,
 - means for transmitting said message text to the communication terminals listed on said list,
 - means for receiving a reply from one of the communication terminals listed on said list,
 - means for transmitting the reply from said one of the communication
- 15 terminals to the communication terminals listed on said list.

20 14. A wireless communication terminal according to claim 13 wherein the transmission means successively transmits said message text to each of said communication terminals listed on said list.

15. A wireless communication terminal according to claims 13 or 14 wherein the transmission means successively re-transmits said reply to each of said communication terminals listed on said list apart from the replying one.

25 16. A wireless communication terminal according to claim 13 wherein the terminal includes means for adding the reply message text above the previous message text prior to the re-transmission of the reply from said one of the communication terminals to the communication terminals listed on said list.
